We provide a range of general dental services. We are best known for delivering beautiful dental cosmetic solutions. Tooth Reshaping Cost Adelaide

Porcelain Dental Veneers

At Adelaide Cosmetic Dentistry every case is assessed based on its own merit. We consider, using your input, as to what is the most cost-effective and minimally invasive procedure we can provide and what is the minimum number of tooth veneers we can place to produce maximum effect. A mock-up treatment is often performed to assess this and also to see if you are comfortable and happy with the estimated end result. Here's how the process takes place.

<p>STEP:1</p>	<p>Consultation</p>  <p>A discussion about what you would like to achieve is the first step. Your options are then discussed based on your individual circumstances.</p>
<p>STEP:2</p>	<p>MOCK UP</p>  <p>If veneers are chosen, a mockup of the finished results is performed directly on your teeth. This assists the dentist and you to examine a very close estimation of what the final result will look like</p>
<p>STEP:3</p>	<p>DIGITAL MOULD</p>  <p>A digital impression (mould) is then taken for making the veneers based on the performed mock up impressions (photos) are taken again to fabricate the final result.</p>

Oral Hygiene Treatment

Lasers have been used in dentistry for decades with proven track record. In our practice, Laser Dentistry is an integral part of the everyday care we provide for our patients.

One of the most important aspect of your oral health, regular oral hygiene treatment is simply having your teeth and gums cleaned professionally by a qualified dental hygienist or dentist on a regular basis.

Locations of missing teeth are carefully assessed and records are taken to detect the amount of bone present in the jaw, the space available for the implant and how the bite comes together. The surgeon then plans the surgery, according to those initial findings. Oral Hygiene Treatment
